Professional Service

In terms of heavy lifting equipment rental, we always take 3 extremely critical measures before every project commencement. These essential measures are taken to ensure seamless work progress and maximal personnel safety

Before any crane work, we send an expert to the construction site to ensure a comprehensive risk assessment is conducted for the project, based on professional expertise and rich experience, to ensure safe operation of our heavy lifting equipment throughout the construction period.

Prior to the rental of heavy lifting equipment, a third party agency--Jabatan Keselamatan dan Kesihatan Pekerjaan, or JKKP--is commissioned to carry out professional inspections to ensure that the heavy lifting equipment and accessories as well as the hoisting machinery meet the required specifications and standards. Meanwhile, PMA CF (Sijil Perakuan Kelayakan Mesin Angkat) is accredited to support the safety requirements of all the necessary equipment

We dispatch only professional crane operators with the necessary professional qualifications. They are registered with the JKKP, with a crane operation registration license from CIDB.

Complete Range of Heavy Lifting Machinery

A company that has been enjoying a steady growth over the years, Infinity Crane & Engineering is well positioned to expand aggressively. In addition to achieving steady business growth, we are continuing to strengthen and expand our range of equipment at the all times, as and when the market requires, including the purchase of 700-ton cranes, beam erectors and other heavy lifting equipment and accessories for rental and subcontracting works. At the same time, we maintain all our heavy lifting equipment and accessories regularly to ensure that they are in the most efficient working condition.

Projects

Endowed with years of valuable experience and technical knowledge, we have become the preferred supplier of lifting machinery services by top Malaysian contractors, allowing us to participate, with great honor, in many landmark projects in Malaysia.

Smooth Communication

Before fulfilling every project or crane rental service, we always communicate patiently with the customer on key issues such as hoisting materials, site environment, schedules etc. Then we commence construction work after good, meticulous communication and planning.

During the communication process with customers, our professional team offers feedback and suggestions, or proposes a constructive plan, to forge an ideal state of cooperation and also to ensure maximal efficiency and construction progress out of our heavy lifting equipment, with the aim of helping our customers complete their projects ahead of schedule.
